-0.5 TO 50 VOLT INPUT - 3 AMP

FEATURES

- Attenuation to 60 dB at 500 kHz, typical
- Operating temperature -55° to +125°C
- Nominal 28 volt input, -0.5 to 50 volt operation
- Transient rating -0.5 to 80 volts for 1 second
- Up to 3 amps throughput current over the full input voltage range of -0.5 to 50 volts
- · Compliant to
 - MIL-STD-461C CE03
 - MIL-STD-461D, E and F CE102
 - MIL-STD-461C CS01
 - MIL-STD-461D, E and F CS101
- Compatible with MIL-STD-704 A-E dc voltage transient surges

FMCE-0328					
INPUT (V)	CURRENT (A)				
0 - 50	3				

DESCRIPTION

The Interpoint® FMCE-0328 Series[™] of EMI filters offers up to 3 amps of throughput current in a low profile package. The FMCE-0328 filters are manufactured in our fully certified and qualified MIL-PRF-38534 Class H production facility and packaged in hermetically sealed steel cases. They are ideal for use in programs requiring high reliability and small size. The FMCE-0328 filter is specifically designed to reduce the input line reflected ripple current of Interpoint high frequency DC-DC converters such as MFX, MTR, MWR, MHF+ and MHV Series. These filters are intended for use in 28 volt applications. At 50 volts input (high line), the filter provides 150 watts of throughput power.

The FMCE-0328 filters are built using thick-film hybrid technology and are hermetically sealed in metal packages for military, aerospace, and other high-reliability applications. Only ceramic capacitors are used in the filters to ensure reliable high temperature operation.

The filters are offered with standard screening, "ES" screening, or fully compliant to "883" MIL-PRF-38534 Class H screening. See Table 6 on page 8 and Table 7 on page 9. DLA Land and Maritime Drawings are available. See Table 2 on page 3.

MIL-STD NOISE MANAGEMENT

When used in conjunction with Interpoint converters, the FMCE-0328 filters reduce input ripple current within the frequency band of 100 kHz to 50 MHz. When used with an Interpoint converter, performance exceeds the CEO3 test of MIL-STD-461C and meets the requirements of CS01 of MIL-STD-461C. These filters also meet CE102 and CS101 of MIL-STD-461D, E and F.

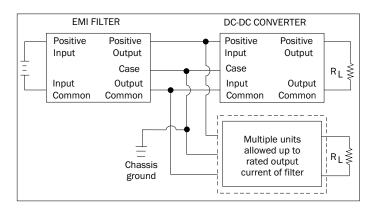

OPERATING TEMPERATURE

The filters are rated to operate, with no degradation of performance, over the temperature range of -55 °C to +125 °C (as measured at the baseplate). Current is derated linearly to 80% at +135 °C case temperature. See Table 4 and Table 5 on page 4.

INSERTION LOSS

Low dc resistance design results in a maximum power loss of less than 2% with typical input voltage.

-0.5 TO 50 VOLT INPUT – 3 AMP

The case ground connection between the filter and the converter should be as low an impedance as possible to minimize EMI. Direct contact of baseplate to chassis ground provides the lowest impedance.

Test methods are referenced to MIL-STD-883 as determined by MIL-PRF-38534.

Notes

1. Non-QML products may not meet all of the requirements of MIL-PRF-38534.

2. All processes are QML qualified and performed by certified operators.

3. Class H QML products have an SMD number

4. Not required by DLA but performed to assure product quality.

5. Burn-in temperature designed to bring the case temperature to +125 °C minimum. Burn-in is a powered test.
